

Velos eTools

powerful, time-saving utility for the Velos eResearch product family

Velos customers appreciate the power and control that Velos eResearch provides. For advanced users, Velos takes power and control one step further with Velos eTools.

Velos eTools is a system administrators' utility suite for the Velos eResearch product family. It empowers system administrators to address the myriad applications and information needs of their user communities without the need for third party tools, expensive services or additional staff. It provides an easy-to-use interface for a variety of complex database-level activities, saving time, money, and headaches for the entire research team.

Core Capabilities

System configuration: A point-and-click format for quickly and easily configuring Velos eResearch dropdowns, dictionaries and lookups.

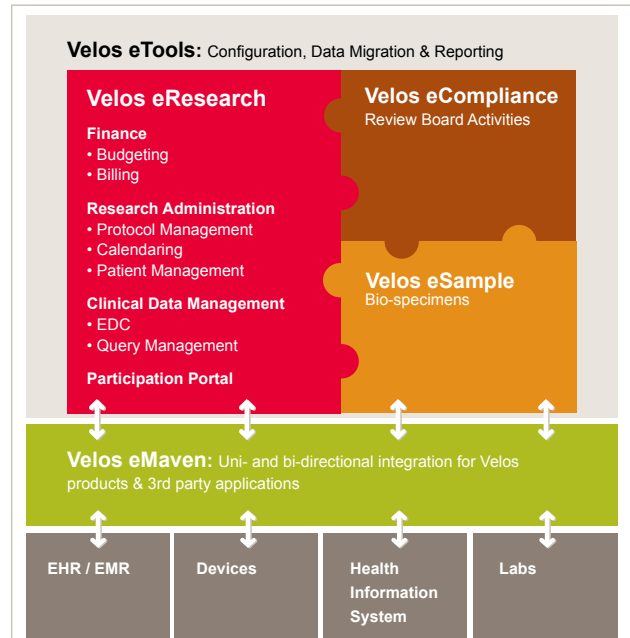

Data migration: Walks users through steps to transfer data sets, automating migration into the corresponding Velos database or forms. There's no need to learn the interdependencies between database tables for accurate and efficient data transfer into Velos.

Study set-up: Reduces time to set up new studies by enabling the upload of study documents such as charge masters, calendars, budgets and forms. Transfers calendars and forms to and from various Velos eResearch environments, and easily transports studies from the test environment to the production environment.

Custom reporting: Enables users to build and apply their own custom reports inside Velos. Saves time and ensures regulatory and privacy compliance by leveraging Velos eResearch user permissions and security configurations when creating and publishing such custom reports. The open database design also allows for the use of any number of commercially available reporting tools.

Third party data submissions: Reduce workload and prevent mistakes by using the built-in rules engine to configure database extraction procedures for third party data submissions such as sponsor data submissions. This capability is particularly useful when the same or similar data submissions are repeatedly required.

Clinical Research Management Suite

Velos eTools supports the entire Velos eResearch product line, which includes Velos eResearch, Velos eSample and Velos eCompliance.

Take advantage of our free product evaluation and see for yourself the power of Velos.
